Michael Godunov
Ruby on Rails developer

Summary:

Greetings! I am an experienced Ruby on Rails developer, proficient in back-end development using the Rails framework. Skilled in working with Ruby and integrating with various APIs. Open to remote employment or relocation.

Employment history and Technical experience:

Etnamed

(October 2022 - until now)

Work in a startup related to the creation of a mobile application.

1. I am engaged in creating mobile application services from scratch, including: services for building chatbots and internal system chats, as well as customer-business chats and etc.;
2. I use REST-API and GraphQL to build the architecture of frontend and backend application interactions, giving preference to the GraphQL technology with the Hasura engine for potentially high-load services;
3. For inter-service communication, I use API through requests, and I also leverage the Karafka library (Apache Kafka — Distributed software message broker);
4. Using kubesphere(kubernetes) for application deployment and gitlab for version management;
5. Working with sidekiq workers, and non-relational Redis database.

Independent developers team

(February 2022 - September 2022)

Working in a small team related to the development of applications and systems from the beginning to the completion of the project.

1. Using Object-Relational Mapping through the ActiveRecord framework to create and work with databases. Creating migrations, modifying models, and validations. Seeding databases;
2. Creating an admin panel, user, user-related databases (for example, store, goods, posts, comments, etc.). Creation and modification of registration forms. Creation of functionality and an interface for user interaction with objects and with other users;
3. Adding mail functionality and the ability to add multimedia content to the project using libraries (gems);
4. Rails Routing: Creating controllers and configuring routes;
5. Creating and modifying views using ERB and Slim;Creating and modifying helpers, partials, and flash;
6. Creating custom cascading style sheets (CSS) and JavaScript for basic front-end;
7. Test-driven development (TDD).

Feniks consulting

(August 2018 - April 2022)

I worked in law. I started as a paralegal and ended up as the head of a legal
